SKILLS

- Programming Languages: Python, PHP, C#, JavaScript
- Web Development: Front-End Development, Node.js, Vue.js
- UI/UX Design
- Team Collaboration
- Problem Solving

EXPERIENCE

Developer Intern (OJT) — New San Jose Builders, Inc.

2026

During my internship at New San Jose Builders, Inc., I worked closely with the IT team to improve the company's attendance management system by enhancing the user interface, developing new features, and assisting with database management. I contributed to both the front-end and back-end development by implementing CRUD functionalities, creating database tables, improving the login system, and generating reports to support daily operations. I also performed system testing, debugging, and troubleshooting to identify and resolve issues before deployment. Through these contributions, I helped improve the system's reliability, usability, and overall efficiency, making daily attendance management smoother and more effective for the company.

Capstone Project — Smart IoT Greenhouse System — Mindoro State University

2025 – 2026

Served as the Hardware Lead for the capstone project by designing, assembling, and integrating the hardware components of the automated greenhouse system. I was responsible for building and testing the device, troubleshooting hardware issues, and ensuring proper integration with the software developed by the team. In addition to the technical responsibilities, I prepared and organized the project's research documentation, contributing to the completion of the capstone paper and ensuring it met the university's academic requirements.

EDUCATION

Bachelor of Science in Information Technology

2022 - 2026

Mindoro State University — Calapan Campus
